Image Quality: Set your camera to the highest image-quality setting. High resolution settings on your camera may vary depending on brand. Check the documentation that came with your camera. If shooting in RAW, please export as a high resolution .jpg via your image editing software.

Resolution can be calculated by multiplying the pixel width of the image by the pixel height. For example, a photograph taken with a 6-megapixel camera set for highest resolution and best quality produces images of about 2832 pixels by 2128 pixels, which are acceptable under the rules (2832 x 2128 = 6 million pixels) Digital images must be sufficient resolution to reproduce well on the printed page.
